

AFRIQIL WILDAN

Data Analyst | Python • SQL • Power BI • Excel • Looker Studio

Open to Remote & International Roles (GMT+7 / WIB) — Professional Working Proficiency in English

Surabaya, Indonesia | +62 878-7192-1272 | wildanafriqil09@gmail.com | [Linkedin](#) | [Github](#) | [Portofolio](#) | [Website](#)

PROFESSIONAL SUMMARY

Data Analyst with a Bachelor of Law background, bringing strong attention to evidence, data validation, structured reporting, and analytical reasoning into data-driven decision-making. Experienced in delivering end-to-end analytics projects across global-scale datasets, including 11.1M+ Airbnb records, 80,000 Apple product price observations, and 18,085 Dubai residential property transactions, using Python, SQL (BigQuery), and Power BI. Skilled in transforming raw data through cleaning, exploratory analysis, statistical testing, and dashboard storytelling to generate actionable insights. Experienced in producing validation reports, stakeholder-facing summaries, and clear documentation within a fast-paced institutional environment.

PROFESSIONAL EXPERIENCE

Data & Administrative Analyst | UM Surabaya Legal Services Institute

Nov 2024 – Present

- Validated an average of 5–7 legal documents per day by reviewing complainant identities, case chronologies, legal bases, and document completeness before internal assessment.
- Classified complainant data, case details, document status, and validation results in an Excel-based tracking system, while standardizing documentation formats to improve traceability and stakeholder communication.
- Prepared validation reports and case summaries to support management and cross-departmental decision-making — experience directly transferable to remote, asynchronous reporting workflows.

PROJECTS

Inside Airbnb NYC Market Analysis & Power BI Dashboard

Python • Pandas • NumPy • SciPy • Power BI • DAX | github.com/afriqil/Inside-Airbnb-Newyork

- Analyzed 11.1M+ calendar records together with public listings and neighbourhood data from Inside Airbnb NYC. Addressed missing values, inconsistent formats, technical sentinel values, and snapshot mismatches through data auditing, chunk-based processing, non-destructive cleaning, integration, and feature engineering in Python.
- Built a fact-dimension data model and Power BI dashboard with DAX to communicate pricing, estimated occupancy and revenue, location, room type, capacity, and host-profile patterns. Findings identified Manhattan as the highest-revenue borough and supported pricing and listing-segmentation decisions.

Apple Product Pricing Analysis

Python • Pandas • NumPy • SciPy • Power BI | github.com/afriqil/Apple-Product-Pricing-Analysis

- Analyzed 80,000 Apple product price observations from 2020–2026 across Amazon and Flipkart using Python, including data standardization, distribution analysis, and validation of premium-product and review-count outliers.
- Built a Power BI dashboard and translated ANOVA, Pearson correlation, and t-test results into pricing and promotion insights. Average discount rose from 8.7% to 26.6%, sale-event discounts were significantly higher, and discount showed only a weak relationship with rating, supporting category and promotion strategy evaluation.

Dubai Residential Property Market Analysis

Python • Pandas • NumPy • SciPy • Power BI | github.com/afriqil/Dubai-Residential-Property-Market-Analysis

- Analyzed 18,085 Dubai residential property transactions from January–July 2026 using Python, including data standardization, extreme-distribution review, suspicious-transaction validation, and transparent data-quality flagging without deleting source records.
- Built a Power BI dashboard to communicate price patterns by location, property type, size, and nearby amenities. Applied a minimum sample threshold to area rankings to improve reliability and support location evaluation and property-valuation strategy.

EDUCATION

Bachelor of Law, Cum Laude | Muhammadiyah University of Surabaya

2021 – 2025

SKILLS

Programming: Python, SQL (Google BigQuery)

Data Analysis: Pandas, NumPy, SciPy, Data Cleaning, Exploratory Data Analysis, Feature Engineering, Statistical Analysis

Visualization & BI: Power BI, DAX, Microsoft Excel, Looker Studio, Dashboard Development

Version Control: Git, GitHub

Languages: English (professional working proficiency — portfolio, documentation, and communication), Bahasa Indonesia (native)

Remote Work Readiness: Independent project delivery, structured written reporting, Git-based version control for asynchronous collaboration, comfortable across time zones

Soft Skills: Data Communication, Attention to Detail, Decision-Making Support

CERTIFICATIONS

- Full Stack Data Analyst Acceleration Class — Pijar Academy, 2026
- Junior Full Stack Web Developer — BNSP, 2023
