

AFRIQIL WILDAN

Data Analyst | Python • SQL • Power BI • Excel • Looker Studio

Open to Remote & International Roles (GMT+7 / WIB) — Professional Working Proficiency in English

Surabaya, Indonesia | +62 878-7192-1272 | wildanafriqil09@gmail.com | [Linkedin](#) | [Github](#) | [Portofolio](#) | [Website](#)

PROFESSIONAL SUMMARY

Data Analyst with a Bachelor of Law background, bringing strong attention to evidence, data validation, structured reporting, and analytical reasoning into data-driven decision-making. Experienced in delivering end-to-end analytics projects across more than 42 million public records, including 30.9M+ NYC Yellow Taxi trips in Google BigQuery, 11.1M+ Airbnb calendar records, and 80,000 Apple product price observations. Skilled in SQL, Python, data cleaning, exploratory and statistical analysis, analytical data modeling, and Power BI dashboard development. Experienced in producing reproducible analyses, validation reports, stakeholder-facing insights, and clear technical documentation.

PROFESSIONAL EXPERIENCE

Data & Administrative Analyst | UM Surabaya Legal Services Institute

Nov 2024 – Present

- Validated an average of 5–7 legal documents per day by reviewing complainant identities, case chronologies, legal bases, and document completeness before internal assessment.
- Classified complainant data, case details, document status, and validation results in an Excel-based tracking system, while standardizing documentation formats to improve traceability and stakeholder communication.
- Prepared validation reports and case summaries to support management and cross-departmental decision-making — experience directly transferable to remote, asynchronous reporting workflows.

PROJECTS

Inside Airbnb NYC Market Analysis & Power BI Dashboard

Python • Pandas • NumPy • SciPy • Power BI • DAX | github.com/afriqil/Inside-Airbnb-Newyork

- Analyzed 11.1M+ calendar records together with 30,259 NYC Airbnb listings and neighbourhood data. Audited missing values, technical sentinel values, inconsistent formats, and snapshot mismatches through chunk-based processing, non-destructive cleaning, data integration, and feature engineering in Python.
- Built a fact-dimension data model and four-page Power BI dashboard with DAX to analyze market supply, pricing, estimated occupancy and revenue, location, room type, capacity, and host performance. Findings identified distinct borough and listing-segment patterns to support pricing and listing strategy.

Apple Product Pricing Analysis

Python • Pandas • NumPy • SciPy • Power BI | github.com/afriqil/Apple-Product-Pricing-Analysis

- Analyzed 80,000 Apple product price observations from 2020–2026 across Amazon and Flipkart using Python, including data standardization, distribution analysis, and validation of premium-product and review-count outliers.
- Built a Power BI dashboard and translated ANOVA, Pearson correlation, and t-test results into pricing and promotion insights. Average discount rose from 8.7% to 26.6%, sale-event discounts were significantly higher, and discount showed only a weak relationship with rating, supporting category and promotion strategy evaluation.

NYC Yellow Taxi Demand & Transaction Analysis

Google BigQuery • GoogleSQL • Excel | <https://github.com/afriqil/nyc-taxi-sql-portfolio>

- Audited 30.9M+ NYC Yellow Taxi trip records in Google BigQuery and created a reusable cleaned analytical view containing 30.22M valid trips, retaining 97.79% of the source data. Applied schema inspection, conditional aggregation, approximate quantiles, timestamp validation, and documented outlier thresholds.
- Used CTEs, joins, SAFE_DIVIDE, LAG, and ROW_NUMBER to analyze monthly and hourly demand, pickup zones, directional routes, payment methods, and credit-card tipping behavior. Identified November as the highest-demand month, Upper East Side South as the highest-volume pickup zone, and JFK Airport as the highest-value pickup zone.

EDUCATION

Bachelor of Law, Cum Laude | Muhammadiyah University of Surabaya

2021 – 2025

SKILLS

Programming : Python, SQL (Google BigQuery)

Data Analysis : Pandas, NumPy, SciPy, Data Cleaning, Exploratory Data Analysis, Feature Engineering, Statistical Analysis

Visualization & BI : Power BI, DAX, Microsoft Excel, Looker Studio, Dashboard Development

Version Control : Git, GitHub

Languages: English (professional working proficiency — portfolio, documentation, and communication), Bahasa Indonesia (native)

Remote Work Readiness: Independent project delivery, structured written reporting, Git-based version control for asynchronous collaboration, comfortable across time zones

Soft Skills: Data Communication, Attention to Detail, Decision-Making Support

CERTIFICATIONS

- Full Stack Data Analyst Acceleration Class — Pijar Academy, 2026 — [Link](#)
- Junior Full Stack Web Developer — BNSP, 2023 — [Link](#)
